Core Skills

- Research and Development
- Improvement of Current Systems
- Development of New Systems
- Prototyping
- Office Management
- Self-Proposal of Tasks

Internship Title: Intern Software Developer

What are the main projects that Intern is working on?

We work on a number of projects and platforms; web, IoT, mobile, VR. And with a number of technologies; Unity, Vue.js, Firebase, Laravel, Vuforia to name a few. The intern will be expected to jump in deep with these technologies and contribute to working, living projects.

We are also open to proposals from interns that satisfy their own interests and studies. For example, we have one intern building data-driven HR and marketing tools for us based on his research interests of document automation.

We will give you an opportunity to work with a young startup on a variety of exciting and challenging projects. This is not for the faint-hearted, you will be expected to be self-starting, skilled with a strong ability to context-switch between different projects and technologies. You will also be expected to have a portfolio of work. For the right candidate we offer a relaxed yet challenging environment, with the potential to work on several interesting projects.
