About the Host Company

From the time we founded our company we have been in the recruitment industry. Rather than just finding a suitable company for the job seekers (clients) we work upholding and considering the client's thoughts and goals. With this ethos we also provide consultation support for entrepreneurs setting up new businesses and provide support and training for an individual's development.

We are a small company but thanks to this we can work closely with managers and learn more about our work and have many experiences which cannot be attained at other companies.

Core Skills

- Research and analysis
- Design electronic or manual website, marketing materials, posters,
- Tech: designing, improving, or contributing to software/hardware
- Social media: Marketing, content, strategy,
- Meetings: Shadowing, note taking, observing
- Business Development: networking, emailing, client visits

Internship Title: New Business Development and Startup Company Experience

What are the main projects that Intern is working on?

The merit of working in a start-up company is that the intern can have more responsibilities and authority. Most companies will require the intern to work a specific job, but we will consider each intern individually and provide them a suitable position.

We will be starting up a new business within our company focused on the use of IT and AI (Artificial Intelligence). Furthermore, you will be involved in the marketing required to build on this sector as well as strategizing and providing sales support.
